
The model showed the garden paths deserved further investigation

Converting surprisals to reading times
for garden-path sentences

Andrew Perun, Mandy Osuji, Rishika Veeramachaneni

The big picture!

Garden-path effects

The officer awarded the honor ~~redemption~~ standing ovation.

Main Verb/Reduced Relative (MVRR)

The actor ~~who was~~ paid the money became vain.

Noun Phrase/Sentence (NPS)

The ~~mechanic who observed~~ that the truck needed repairing.

Noun Phrase/Zero (NPZ)

~~On meeting them~~ ~~as word had started~~, the restaurant flourished.

Surprisal theory

$$\text{surprisal}(w_i) = -\log P(w_i | w_1 \dots w_{i-1})$$

The operator observed the machine **started** working efficiently all of a sudden.

The operator observed that the machine **started** working efficiently all of a sudden.

Arehalli

Surprisal

- Syntactic Surprisal
 - Enriched POS Tagger
- Surprisal Theory
 - Linear to RT

Mapping Surprisal: Mixed-Effect Models

Predictors → RT

Surprisal Metric			
Only Syntactic	Only Lexical	Both	Neither

Non-Surprisal: Unigram frequency, Word Position, Word Length

Word N, N-1, N-2

Mapping Surprisal: Mixed-Effect Models

Train

Filler (Unambiguous)

Evaluate

Garden Path

Model Predictors \rightarrow RT \rightarrow RT Differences/GP Effect

Their Results:

Their Results:

**Why did they fail to capture the
magnitude of empirical garden path
effects?**

Surprisal to RT Model?

Could we improve their results?

Arehalli's Model Mistakes:

Trained to translate Surprisals to RTs

Training Data

Test Data

These are not the same!

Experiment 1

3 Models:

Train

Syntactic Surprisals
from Filler & 2 from
{MVRR, NPS, NPZ}

Evaluate

Syntactic Surprisals
from Excluded Garden
Path Case

Syntactic Surprisal \rightarrow RT

Experiment 2

3 Models:

Train

Syntactic Surprisals
from 2 of {MVRR, NPS,
NPZ}

Evaluate

Syntactic Surprisals
from Excluded Garden
Path Case

Syntactic Surprisal \rightarrow RT

Conclusions & Discussion

- Incorporating GP cases improves RT predictions, but not as desired
- The relationship between syntactic surprisal & RT is not preserved between GP cases
- Surprisal theory may not fully explain the human GP effect
- No good method for prediction across cases
